CARD CREATION

Value Definition

1

Define your top 3 values — abstract concepts — in operational terms.

ABSTRACT MEANING

What does this value generally mean?

OPERATIONAL DEFINITION

How would you recognize this value in practice? What would it look like concretely?

EXAMPLES

Where in your project does it show up?

PART 1 · 25 MINUTES

Value Hierarchy Trees

Translate your 2–3 chosen and operationalized key values into norms and design requirements (after Van de Poel).

VALUE

↳ NORM · NORM

↳ REQUIREMENT · REQUIREMENT

PART 2A · 15 MINUTES

3

Map Value Tensions

Trace value tensions within your project. Focus on the most critical ones. Tensions can occur between values, but also between norms and requirements.

VALUE A ⟷ VALUE B

PART 2B · 15 MINUTES

Resolve Conflicts

4

Resolve traced conflicts by dissolving, compromising, or trading-off. As conflicts resolve, they become new design requirements.

DISSOLVE

Innovative design avoids the conflict entirely.

COMPROMISE

Both values are partially satisfied.

TRADE-OFF

Prioritize one value; note the consequence and any future mitigations.

RESOLVE CONFLICTS

Dissolved

Innovative design avoids the conflict

Value conflict

Value outcome

Dissolution solution

RESOLVE CONFLICTS

Compromised

Both values partially satisfied

Value conflict

Value outcome

Compromise solution

RESOLVE CONFLICTS

Trade-off

Prioritize one value; document the consequence

Value conflict

Value trade-off consequence

Trade-off decision

Potential future mitigations
