VALUES AT PLAY: VALUE DISCOVERY CANVAS

DISCOVERY I: SOURCE VALUES (implicit & explicit):

Logo Here

ORG NAME

PITECH FELLOW NAME | Pronouns

Replace this text with information about the PiTech.

Replace this with information about your role within.

Functional Description

Functional Description

What does your PiTech organization and their core product do & care about?

Mission Statement

Explore the organization's mission and how it aligns with the project goals.

Source (small text) — Value (Large text)

Problems Solved

Explanation of the key issues your PiTech organization addresses.

Stated Goals

Review the project's stated goals and objectives for clarity and alignment.

Key Actors & Stakeholders

Identifying Key Actors

What are the stakeholders underlying values?

Stakeholder Analysis

Target Audience

Identify the primary target audience for the project and their stated needs and interests.

Founders

- Identify funders and their original interests

Funders / Investors

- Identify funders and their interests

Employees / Creators

- Understand employee interests roles and responsibilities

PiTech Fellow

What value(s) do you and your positionality come with?

Users / Beneficiaries

- Define user demographics interests and needs, think extensively about extended user groups

Affected Communities

- Explore the impact on extended communities

Partners

- Evaluate partnerships and external collaborations

Technical/Material Constraints

Technical Constraints and Collateral Values

What are values carried into the project from technical and material constraints?

Platform Limitations

- Detail the limitations of the current platform.

Data Requirements

- Discuss the essential data needed for operations.

Infrastructure Requirements

- Identify critical infrastructure requirements.

Resource Constraints

- Identify constraints from resources

Societal Context

External Forces Impacting PiTech

What values are carried from societal context into your project?

Legal and Compliance Landscape

Explore the current legal environment (laws and regulations) affecting PiTech's operations and strategies.

Cultural Norms

Analyze how cultural norms and values shape PiTech's interactions with stakeholders.

Industry Standards

Investigate the industry standards that PiTech must adhere to for successful integration.

Geographic Context

Consider the geographical context in which PiTech operates and its implications on outreach.

DISCOVERY II: OPERATIONALIZING VALUES

Values Clustering

Values Clustering

Grouping Values

COPY ALL VALUES OVER: Collaboratively group similar values together to identify common themes and overlaps.

Value1 | Value2 | Value3

Value4 | Value5 | Value6

Values Selection

Value Selection

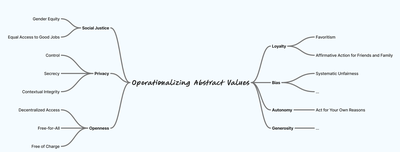
Select 5-7 Key Values

Select the most important values YOUR PiTech project is trying to establish

Value1 | Value2 | Value3

Value4 | Value5

How-to Operationalize



Develop a clear and consistent meaning of the values discovered, not necessarily a universal analysis.

Ethical and political values (such as justice, fairness, privacy, tolerance, autonomy, and liberty) are conceptually abstract, controversial, and notoriously difficult to define. Yet when we reach for them to describe a political system, a relationship, an organization, or a competition, we have in mind definitions or interpretations that are concrete, specific, and operational. Transforming a value from an abstraction to a fully articulated concept makes it accessible to design and capable of influencing architecture and features. It is the work of definition and analysis that forms a necessary bridge between abstract value concepts and concretely articulated conceptualizations able to guide a designer's hand.

The designer also must be guided by a sound and reflective grasp of the value concept.

Well-defined concepts (privacy, openness, or any other value at play) are of more than philosophical interest: they have genuine consequences for the technologies in our lives.

Value Definition

Value Definition Card Creation

Define top 3 values, which are abstract concepts, in operation terms

Value: Name

- ABSTRACT MEANING: What does this generally mean?
- OPERATIONAL DEFINITION: How would you recognize this value in practice? What would it look like concretely?
- EXAMPLES:

Value: Name
